Jason Lee

Austin, TX | P: 818-336-2105 | lee.jason930@gmail.com | jasonjl.me

SKILLS

Backend: Python, Django, Docker, Postgres, ElasticSearch, Redis, Celery, SSE, FastAPI,
Frontend: React, NextJS, TypeScript, Tailwind, JavaScript, SPAs, Mobile optimized
CI/CD/Infra: Github Actions, Terraform, AWS (ECS, ECR, RDS, S3, Cognito, ElastiCache, CloudFront, Lambda, …)

WORK EXPERIENCE

UncappedPotential San Francisco, CA (Remote)
Lead Engineer 2025 -

- Piecemeal migrated vibe coded platform to follow simple and extendable patterns on efficient front-end query caching, live data syncing with SSE, Organization scoped tenancy, flexible permissioning system, plug and playable AI models
- Educating and elevating multiple independent skunkworks teams on architecture, security, product decisions through audits and signing off on safety / production-ready confidence.
- Enforce engineering policies through code with a hands-off CI/CD deployment pipeline empowering engineers and product teams to safely experiment, contribute, test, and deploy with no manual process or supervision.
- Evaluated AI model price per performance for multiple disparate tasks through a repeatable model evaluation framework allowing us to objectively select the best model per task

Folio Oakland, CA (Remote)
Founding Engineer 2023 - 2025

- Rebuilt and migrated a no-code platform to a horizontally scalable AI integrated Django app with 99.999% SLA.
- Defined a high level of collaborative engineering standards through defining frameworks, patterns, and practices in all aspects of full stack engineering such as Oauth authentication, role based authorization, Restful APIs, custom React component library, consistent error handling, robust webhook handling, reoccurring invoicing, vector search indexing, testing, etc
- Unblocked business operation teams in triaging short and long term technical side-requests like product feature flags, marketing analytics, data ETL, in addition to building features on the core roadmap
- Enforced high bar of code quality and code testing repeatability by evangelizing best practices and implementing automated code quality checks resulting in more maintainable code, fewer production incidents, and reliable releases.

Alation Redwood City, CA (Remote)
Senior Software Engineer 2018 - 2023

- Lead the engineering team providing guidance, direction and alignment to all team members including external stakeholders throughout the software development cycle from requirements planning to maintenance and support.
- Optimized application performance through bottleneck research and analysis on the entire web stack gaining 5x faster request times across the board with targeted effective fixes.
- Troubleshooter and ambassador to clients performing live on-site and remote support and providing educational seminars on system functionality that lead to saving customers from churning.

Alation Redwood City, CA
Fullstack Software Engineer 2015- 2018

- Redesigned front-end of Alation's cloud SQL IDE with a more intuitive and beautiful user experience with features like collapsable and draggable panels, hotkeys, query browser, tabbed workspaces, custom themes, user settings.
- Founding developer to Alation's catalog redesign constructing easy to use and maintainable UI frameworks including configurable panels and modal management.
- Initial developer of Alation's internal visual component library, empowering future developers to create a consistent, custom, and complex UI experience using simple building blocks.

EDUCATION

University of California Irvine Irvine, CA
B.S. Major in Information and Computer Science
B.A Major in Music
